## User Story & Acceptance Criteria

“As a <user type>, I want <action/feature> so that <goal/rationale>.”

Example:

“As a user, I want to reset my password so that I can regain access to my account if I forget

my credentials

**Acceptance Criteria**

**Given** <initial state/page>
**When** <user action>
**Then** <system output/reaction>

Example:

User story:

“As a customer, I want to create a subscription plan with my preferred currency and amount so that I can pay for my subscription.”

Acceptance criteria:

1. **Access payment settings**
   - Given the user is on the settings page,
   - When the user selects “Payments”,
   - Then the system displays the payment configuration options.
2. **Choose currency**
   - Given the user is on the payment section,
   - When the user selects a currency,
   - Then the selected currency is applied to the subscription plan setup.
3. **(Further criteria)** – amount selection, validation, saving, confirmation, etc.

| User Story | Assignee | Acceptance Criteria |
|---|---|---|
| As a user, I want to know the best route via | Milo | **Given** the user is on the main map view page and has location services |

| | | |
|---|---|---|
| bike to my destination so that I arrive on time and feel safe during my journey. | | enabled<br><br>**When** the user searches for a destination<br><br>**Then** shortest bike route is generated and visualised as a highlight with a time pop-up<br><br>**Given** the user is on<br><br>**When** they select a station<br><br>**Then** an option to add to route appears, the station is highlighted and your existing route selection is updated in a pop-up.<br><br>**Given** a user has calculated or plotted a route<br><br>**When** they click on said route<br><br>**Then** they should receive some information on the perspective safety within the route pop up. |
| As a user, I want to know the predicted weather during my journey so that I can plan what I need to wear or what transport mode to use. | Milo | **Given** a user is on the main map view<br><br>**When** they click on a weather widget<br><br>**Then** the widget collapses down and shows an hourly report of the weather. |
| As a user, I want to know the availability of the bicycle station so that I can find a parking place. | Milo | **Given** the user is on the main map view<br><br>**When** they select a station |

| | | |
|---|---|---|
| | | **Then** element on the pop up should appear which indicates the number of total and available spaces. |
| As a user, I want to be noted if there is some interruption or weather warning so that I can change my journey if needed. | Milo | **Given** the user is on the main page then<br><br>**When** a weather warning is released<br><br>**Then** a pop up or notification should appear to the user |
| As a user, I want to know how long my journey is expected to take so that I can leave in time to reach my destination. | Milo | **Given** the user has searched for a route on the main map page<br><br>**When** they select a route the highlighted route should display<br><br>**Then** on the "Route" pop-up expected time should be visualised |
| As a user, I want to have an access of payment so that I could pay easily via my online banking | Xiya | 1. Access payment settings<br><br>**Given** the user is on the Settings page,<br>**When** the user selects **"Payments"**,<br>**Then** the system displays the payment options and the payment setup entry point.<br><br>2. Choose payment method<br><br>**Given** the user is on the Payments page,<br>**When** the user selects **"Online Banking"** as the payment method,<br>**Then** the system shows the required online banking payment flow (e.g., supported banks or provider instructions).<br><br>3. Currency |

**Given** the user is configuring a payment (currency and amount),
**When** the user enters an amount that is empty, zero, or negative (or not valid for the selected currency),
**Then** the system blocks submission and displays a clear validation message.

4. Initiate payment and redirect to online banking/payment provider

**Given** the user has selected **Online Banking** and entered a valid currency and amount,
**When** the user clicks **“Pay” / “Continue”**,
**Then** the system creates a payment request and redirects the user to the online banking (or payment provider) page to complete the payment.

5. Processing after successful payment

**Given** the user completes the payment on the online banking/provider page,
**When** the provider redirects the user back to the app,
**Then** the system marks the payment as **successful**, updates the subscription status accordingly, and shows a success confirmation (with receipt/reference if available).

6. Handling payment failures/cancellations

**Given** the user cancels the payment or the provider returns a failure status,

| | | |
|---|---|---|
| | | **When** the user is redirected back to the app,<br>**Then** the system marks the payment as **failed/cancelled**, keeps the subscription unpaid, and shows an actionable message (retry, choose another method, or contact support).<br>7. Repeat payment<br><br>**Given** the user has initiated a payment and a payment request is already **pending** (not yet confirmed),<br>**When** the user clicks **"Pay/Continue"** multiple times or refreshes and tries to submit again,<br>**Then** the system does **not** create a second payment request, and either (a) reuses the existing pending payment session or (b) shows a message that a payment is already in progress (with a safe option to continue or cancel). |
| As a user, I want to know if there are bikes available at my station so that I can make sure that I have a bike available for my future journey. | Xiya | 1. Check the number of available bicycles at the site.<br><br>**Given** the user is viewing the map or station list,<br>**When** the user selects a specific bike station,<br>**Then** the system displays the number of available bikes and available stands for that station.<br>2. Notification when no bicycles are available<br><br>**Given** the user has selected a station,<br>**When** the available bikes count is **0**,<br>**Then** the system clearly shows that |

no bikes are available and suggests checking nearby stations (if applicable).

3. Displays real-time data (from the API)

**Given** the user is on the station details view,
**When** the system retrieves data from the bike availability API (e.g., JCDecaux),
**Then** the availability information is updated with the latest real-time data.

4. Data loading status

**Given** the user selects a station,
**When** the system is fetching availability data,
**Then** a loading indicator is displayed until the data is received.

5. API failure or network error handling

**Given** the system fails to fetch availability data (API error or network issue),
**When** the request times out or returns an error,
**Then** the system shows an error message and allows the user to retry.

6. Manually refresh data

**Given** the user is viewing station availability,
**When** the user taps a refresh button or pulls to refresh,
**Then** the system requests the latest

| | | |
|---|---|---|
| | | availability data and updates the display |
| As a user, I want to be able to reserve a bicycle at my station so that I am completely sure I have a way to reach my destination. | Xiya | 1. Access the reservation function<br><br>**Given** the user is viewing a station with available bikes,<br>**When** the user selects **"Reserve Bike"**,<br>**Then** the system displays the reservation confirmation screen with station details and reservation time limit<br><br>2. Reservation created successfully<br><br>**Given** the selected station has at least one available bike,<br>**When** the user confirms the reservation,<br>**Then** the system creates a reservation and shows a confirmation message with reservation details (station name, time, expiry countdown).<br><br>3. Reservations are prohibited when there are no cars available.<br><br>**Given** the user is on a station page,<br>**When** the available bike count is **0**,<br>**Then** the **"Reserve Bike"** option is disabled or shows a message that reservation is not possible.<br><br>4. Booking time limit (expiration will be processed)<br><br>**Given** the user has an active reservation,<br>**When** the reservation time expires without pickup, |

| | | |
|---|---|---|
| | | **Then** the system automatically cancels the reservation and releases the bike back to availability<br>5. Prevent duplicate bookings<br>**Given** the user already has an active reservation,<br>**When** the user attempts to reserve another bike,<br>**Then** the system prevents creating a second reservation and displays a message indicating an existing reservation.<br>6. Cancel reservation<br>**Given** the user has an active reservation,<br>**When** the user selects **"Cancel Reservation"**,<br>**Then** the system cancels the reservation and updates the station availability accordingly. |
| As a user, I want to know or filter the cost of the journey so that I can save money or stay within my budget on my journey. | Xiya | 1. View itinerary costs<br>**Given** the user has selected a start and destination station,<br>**When** the journey options are displayed,<br>**Then** the system shows the estimated cost for each journey option.<br>2. Real-time cost display during an active journey<br>**Given** an active journey is in progress,<br>**When** the trip duration or distance increases,<br>**Then** the system recalculates the |

| | | |
|---|---|---|
| | | current fare and displays the updated cost to the user automatically. |
| As a user, I want to be able to share my journey to export my journey history so that I can keep track of my journeys, costs, or share with my friends. | Xiya | 1. View Journey History<br><br>**Given** the user is on the **Journey History** page,<br>**When** the system loads the history data,<br>**Then** the user can see a list of past journeys including date, stations, duration, and cost.<br><br>2. Export Journey Records<br><br>**Given** the user is viewing their journey history,<br>**When** the user selects **"Export"**,<br>**Then** the system generates a downloadable file (e.g., PDF or CSV) containing the selected journey records.<br><br>3. Share Journeys<br><br>**Given** the user has selected a journey or multiple journeys,<br>**When** the user clicks **"Share"**,<br>**Then** the system provides sharing options (e.g., link, message, or social sharing).<br><br>4. No Journey History Available<br><br>**Given** the user has no journey history,<br>**When** the Journey History page is opened,<br>**Then** the system displays a message indicating that no journeys are available<br><br>5. Export Failure Handling |

| | | |
|---|---|---|
| | | **Given** the user attempts to export journey data,<br>**When** the export process fails (network or system error),<br>**Then** the system shows an error message and allows the user to retry.<br>6. Privacy and Access Control<br>**Given** the user shares a journey,<br>**When** the sharing link or file is generated,<br>**Then** only the selected journey information is included and personal sensitive data is excluded. |
| As a user, I want to find the real time condition (e.g. the condition of electricity) of my bicycle so that I won't get stuck in a poor bicycle condition. | Dan | 1. View Bike Conditions:<br>Given the user selects a bike or station,<br>When the system retrieves the lates bicycle data,<br>Then the system displays the current/desired bike condition<br>2. Unhealthy bike warning:<br>Given the bicycle condition indicates a problem (low battery or out of service)<br>When the bike is displayed to the user,<br>Then the system clearly marks the bike as unsuitable for use and shows a warning message.<br>3. Missing or unavailable condition data |

| | | |
|---|---|---|
| | | Given real-time condition data is unavailable,<br><br>When the user views the bike information,<br><br>Then the system shows a message indicating that condition data is not available and advises caution. |
| As a user, I want to have the best route plan so that I will get my route and arrive on time | Dan | 1. Generate best route:<br><br>Given the user enters a start and destination,<br><br>When the user requests a route,<br><br>Then the system displayed the optimal cycling route on the map.<br><br>2. Estimated journey time:<br><br>Given a route is generated,<br><br>When the route is shown to the user,<br><br>Then the system displays the estimated travel time for the journey.<br><br>3. Route Update:<br><br>Given external conditions change (weather, traffic)<br><br>When the route is recalculated,<br><br>Then the system updates the suggested route and estimated arrival time.<br><br>4. No route available:<br><br>Given no suitable cycling route can be calculated,<br><br>When the user requests the route, |

| | | |
|---|---|---|
| | | Then the system displays an error messages and suggest alternative options. |
| As a user, I want to see real-time and predicted bike availability at my usual stations so that I don't risk arriving late at work. | Dan | Given the user has marked a station as a favourite.<br><br>When the user opens the app.<br><br>Then The system shows current availability and a short-term prediction.<br><br>Given predicted availability is low.<br><br>When the user checks the station.<br><br>Then the system suggest nearby alternative stations. |
| As a user, I want accurate journey time estimates based on time of day and weather so that I can decide when to leave. | Dan | Given the user selects a start and destination.<br><br>When the route is calculated.<br><br>Then the system displays an estimated travel time adjusted for: Time of day, Current and forecast weather.<br><br>Given weather conditions worsen (rain, wind)<br><br>When the journey is recalculated,<br><br>Then the estimated time updates automatically. |
| As a user,I want to receive alerts if my planned commute becomes unreliable so | Dan | Given the user has a saved or upcoming journey. |

| | | |
|---|---|---|
| that I can change plans quickly. | | When bike availability drops, weather worsens, or stations close.<br><br>Then the system sends a notifications explaining the issue.<br><br><br>Given an alert is triggered.<br><br>When the user opens it.<br><br>Then the app suggests alternative routes or stations. |
